

If group interaction is appropriate for your child, come to the

## **SOCIAL ENHANCEMENT GROUP**

at **SPEECH & LANGUAGE STIMULATION CENTER.**

---

Children with Autism Spectrum Disorder (ASD) typically have limited skills in building friendships. But we know that children with ASD are interested in socializing with peers. In this group for children ages 3-6, we use shared activities to create an environment that encourages them to safely explore some of the skills needed to make and be friends. Common goals include developing an increased awareness of others and communicating with peers in socially appropriate ways. Individual goals are tailored to match the unique strengths of each child.

---

### **Where it is happening?**

Speech & Language Stimulation Center  
760 Whalers Way Bldg C Suite #100  
Fort Collins, Colorado 80525
